

Practice 4 _ 2021105662 _ 홍예림

```
# Edit this file to introduce tasks to be run by cron.
#
# Each task to run has to be defined through a single line
# indicating with different fields when the task will be run
# and what command to run for the task
#
# To define the time you can provide concrete values for
# minute (m), hour (h), day of month (dom), month (mon),
# and day of week (dow) or use '*' in these fields (for 'any').
#
# Notice that tasks will be started based on the cron's system
# daemon's notion of time and timezones.
#
# Output of the crontab jobs (including errors) is sent through
# email to the user the crontab file belongs to (unless redirected).
#
# For example, you can run a backup of all your user accounts
# at 5 a.m every week with:
# 0 5 * * 1 tar -zcf /var/backups/home.tgz /home/
#
# For more information see the manual pages of crontab(5) and cron(8)
#
# m h dom mon dow   command
* * * * * python3 /home/yenny/Bigdataprogramming/week3/practice4.py >> /home/yenny/Bigdataprogramming/week3/test.log
```

실행 코드

Practice4.py 파일을 매분마다 실행하여 test.log파일에 기록을 남긴다.

">>"를 사용해 기존의 test.log에 이어서 로그를 기록한다.

```
yenny@LAPTOP-H32FPHHG: ~/Bigdataprogramming/week3$ cat test.log
DATE: 2024-03-22 10:37:02 미국 USD : 1,333.20
DATE: 2024-03-22 10:38:01 미국 USD : 1,333.90
```

실행 결과
